

Lec 9: Queues
Array-BasedWhy Queues?? \rightarrow First In First Out (FIFO)

Here we are assuming all elements have same priority.

Array imp 1: Physical model {Front is Fixed}, Rear Dynamic

- in dequeue we should shift all elements (Big complexity)
So we use...

Array imp 2: Linear model {+ two indices, Front and Rear}

will have problem in size so we use...

Array imp 3: Circular

Front: Rear / occupied

Rear: Front / Free

To make DIFF between empty and full queue we waste one location

Smarter way: use size variable \rightarrow also this let us know queue size (0-1)
